

RiskSense Third-Party Integrations

BENEFITS

Change the economics of security operations. The RiskSense Smart Connector Framework enables the automated ingestion of a variety of data sources via flat file, XML, web service API, or dedicated connectors. Instead of hiring legions of staff to comb through the huge amount of data to connect the dots and find the needle in the haystack, the RiskSense platform does all this for you.

We partner with industry-leading technology vendors across security and IT operations to help customers preserve their existing investments in best-of-breed tools while breaking down the silos that typically prevent aggregating data swiftly and analyzing it to increase situational awareness across a growing attack surface.

Network Scanner Connectors

 <small>XML</small> BeyondTrust Retina Network Security Scanner	 <small>XLS</small> Coalfire Navis® RapidScan Complete	 <small>XML</small> GFI LanGuard® Network Security Scanner	 <small>XML</small> Greenbone Networks OpenVAS
 <small>XML</small> McAfee Vulnerability Manager	 <small>XML</small> Nmap (now Rapid7 AppSpider)	 <small>XML</small> Qualys Vulnerability Management (VM)	 <small>XML · API</small> Rapid7 Nexpose®
 <small>XML</small> SAINTscanner®	 <small>XML · API</small> Tenable Network Security Nessus® Tenable SecurityCenter		

Web Application Scanner Connectors

 <small>XML</small> Acunetix	 <small>XML</small> Arachni	 <small>XML</small> Micro Focus WebInspect	 <small>XML</small> IBM Security AppScan
 <small>XML</small> Netsparker	 <small>XML</small> Nikto	 <small>XML</small> OWASP Zap	 <small>XML</small> Portswigger Burp Suite
 <small>XML</small> Qualys Web Application Scanning (WAS)	 <small>XML · API</small> Trustwave App Scanner Family (Hailstorm™)	 <small>XML</small> w3af	 <small>API</small> WhiteHat Security Dynamic Application Security Testing (DAST)

The RiskSense platform ingests data from a variety of security and IT tools

The RiskSense platform ingests data from a variety of security and IT tools as well as external threat data feeds.

Ultimately, it preserves your existing technology investments and enhances their value by automating the data aggregation, correlation, and normalization process. The result is a contextualized, risk-based view of your organization's cybersecurity posture, allowing your security and IT teams to move from detection to remediation in minutes, not months.

Ticketing System Connectors

Database Connectors
