"Open Source Software Flaws Rise by 130% in 2019"

CISO MAG
beyond cybersecurity

This month we released our latest vulnerability research report, RiskSense Spotlight Report: The Dark Reality of Open Source.

From this we achieved more press coverage than ever – obviously Open Source is a hot topic in the industry. It should be with open source software (OSS) being used in nearly 96 percent of all commercial codebases, according a recent report.

This report comes after the RiskSense Spotlight Report: Cracks in the Foundation of Web and Application Frameworks. If you haven't noticed the trend, applications are increasingly important for most organizations, so **Application Security** is a growing concern.

Full Spectrum Risk-Based Vulnerability Management is needed to incorporate Application vulnerability risk with Infrastructure risk. We are scheduling training with our Partners in the next few weeks as a pre-cursor to announcing new capabilities that will accelerate how organizations can cost-effectively manage vulnerability risk across all types of assets, including applications. We'll show you the changes to the RiskSense platform that deliver vulnerability risk and exposure from applications in development through to production with threat-context prioritization.

Check your schedules for the training, you don't want to miss it.

RiskSense in the News

DHS CISA AND FBI Share List of Top 10 Most Exploited Vulnerabilities
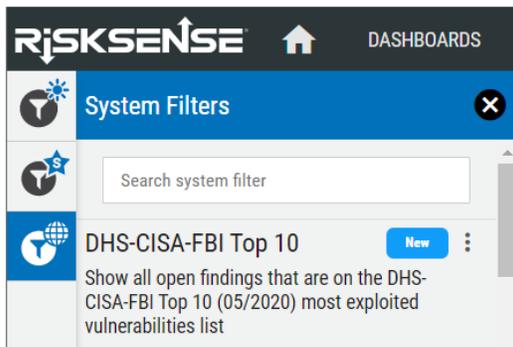

Office is the most exploited technology, followed by Apache Struts. One of RiskSense's early research reports was mentioned as the Apache Struts vulnerability still lingers. This is alert

reinforces the fact that active exploits leverage vulnerabilities that have been known for years, and not always deemed CVSS Critical.

RiskSense Updates

DHS-CISA-FBI Top 10 - System Filter

Within 24 hours of the DHS CISA and FBI Alert being released, the RiskSense team released a new System Filter. Now, with one click organizations can quickly assess what assets are at risk without having to dig into and report on individual CVEs. Share with your prospects and see if they would like a demo.
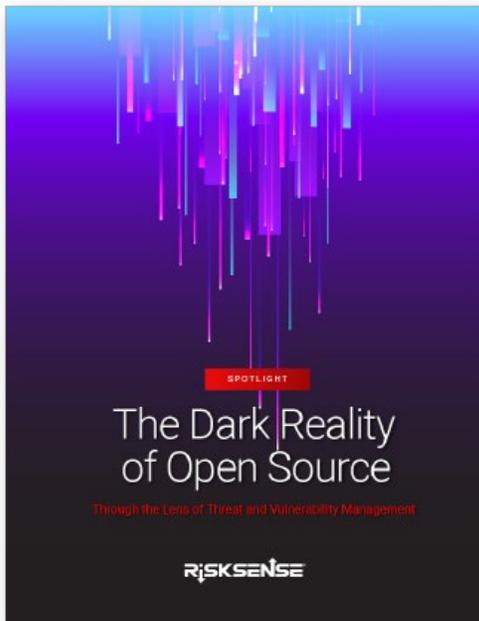

RiskSense Spotlight Report:
The Dark Reality of Open Source

Open source software (OSS) is now a major part of every organization's attack surface and organizations are being blindsided by the increased risk to their security posture. RiskSense looked at the 50 most popular OSS projects and their vulnerability trends.

RiskSense has shared this and supporting marketing materials with our Partners as a Campaign-in-a-Box. Ask your team if they are taking advantage of this resource.
